DeepSeek Harness plugins, one command away.

dshmarketplace.dev

About

DeepSeek Harness Plugins is a free directory for finding DeepSeek Harness plugins with install commands, source repos, licences, and install status in one place. It indexes 4,907 community entries from the registry and the dsh-plugin GitHub topic, so you can compare options before you run anything. The site is sign-up free and focuses on practical details like what each plugin can reach, whether it actually installs in a clean profile, and how recently the repository was updated.

What is DeepSeek Harness Plugins

DeepSeek Harness Plugins is an independent plugin catalogue for the DeepSeek

DeepSeek Harness Plugins

Visit ↗

through separate repositories, and it highlights the information people usually need before installation: the command, the source repo, the licence, and the scope of access.

The directory currently shows:

4,907 indexed DeepSeek Harness plugins

14 categories

80 live detail pages

a last sync date of 2026-08-22

It is designed as a browsing and comparison layer, not as the runtime that executes the plugins themselves. That makes it useful when you want to review the ecosystem first and decide what to install later.

Key features

Per-plugin install information: Each listing includes the install command when one exists, so you do not need to hunt through repository files to get started.

Repository and licence visibility: The directory surfaces the source repo and the licence, which helps with maintenance checks and reuse decisions.

Reach and capability notes: Listings explain what a plugin can access or interact with, so you can assess the blast radius before installation.

Install-status checking: The site records whether a plugin actually installs in a clean profile, which is more practical than trusting a README alone.

Ranking by GitHub stars: The “Most starred” view sorts by repository popularity and also shows the last push date, so popularity is not confused with active maintenance.

Detail pages for selected entries: Only 80 pages are live right now, which suggests the catalogue is broader than the set of fully expanded profiles.

No account required: The site is free to browse and does not ask for sign-up.

Additional navigation and utility pages: The header exposes sections like Presets, Install, How it works, API, and Submit a plugin.

How to use it

DeepSeek Harness Plugins

Open the detail page for the plugin you are considering.

Check the install command and confirm whether the listing reports a successful install.

Read the source repo and licence before using the plugin in your own workspace.

Review the reach description to understand what the plugin can access, then decide whether that matches your security expectations.

Use the “last push” or recent activity signal to separate active projects from abandoned ones.

Submit a plugin if you maintain one and want it added to the directory.

If you are using the API or building your own workflow around the catalogue, the site also exposes a structured way to inspect entries rather than relying only on the web UI.

Who it is for

This DeepSeek Harness plugin directory is useful for people who want to expand the DeepSeek Harness agent environment with community extensions, but do not want to install blindly.

It is a good fit for:

agent users who want memory, UI, or workflow plugins

developers evaluating source repositories before adoption

maintainers checking whether a plugin is still active

people comparing similar plugins by licence or capability

users who want a fast way to browse the DeepSeek Harness ecosystem without creating an account

The catalogue leans toward practical evaluation, so it is especially helpful when installation safety, repository provenance, and plugin reach matter more than marketing copy.

What to know before you use it

The directory is only as accurate as the source data it syncs from, so repo metadata,

DeepSeek Harness Plugins

Star counts measure visibility, not code quality or maintenance health. The site itself calls out last-push timing for that reason.

Some listings may say there is no one-line install because the plugin lives inside a larger repository and does not publish a separate package.

At least one reviewed entry mentions shell command execution, and another requires an API key or token, so you should treat each plugin as a tool with its own permissions and setup cost.

The site notes that clean-profile install results come from real runs, while the rest of the listing details come from repository information; if you need canonical installation steps or security guarantees, go back to the official source repo.

Only 80 detail pages are live even though 4,907 plugins are indexed, so some entries may be browse-only until their page is expanded.

For people exploring the DeepSeek Harness ecosystem, this marketplace is a fast way to compare options, filter by practical constraints, and avoid installing a plugin until you know what it reaches and whether it really works.

FAQ

Is DeepSeek Harness Plugins free to use?

Does it show whether a plugin actually installs?

How many plugins are indexed in the directory?

What information does each plugin card include?

Does the directory show whether a plugin installs successfully?
